Winton Laubach : A Mathematical Medley before purchasing it in order to gauge whether or not it would be worth my time, and all praised A Mathematical Medley:

Recreational math and science topics. Imaginative problems and tips for "mental arithmetic". Intriguing chapters on terrestrial navigation and much ado about lunar and planetary orbits.

Too often mathematics is displayed as a discipline interested only in furthering itself. Professor Laubach has retained his sense of delight with the potentials of mathematics and shares some of his fun applications with us in "A Mathematical Medley". His sense of humor is evident in the goodies filling the interstices of the book. This is an altogether delightful collection. -- Walter W. Whitman, Prof. Emeritus of Geophysics and sometime professor of Mathematics, Colorado School of Mines

About the Author
Raised in rural Pennsylvania. Graduated from Bloomsburg State University and earned Master's degree in Mathematice from Columbia University, New York City. Taught at Penn State University and the Colorado School of Mines out west in Golden, Colorado. Author is blind and enjoys working mathematics and science problems in his head. Solves cryptograms and crossword puzzles with his wife who is more useful than a guide dog. Friends, a passion for baseball, and a 30-year, Saturday morning coffee group with other retired professors keeps him whistling. Looks forward to becoming an octogenarian in 2000.
